Professional Summary

Full-stack engineer and ML practitioner with experience building AI-powered applications, from real-time AR systems to NLP pipelines. Passionate about bridging technical depth and human-centered design.

EDUCATION

Virginia Tech **Aug 2023 - May 2024**
Masters of Engineering in Computer Science, Concentration in Human Computer Interaction GPA: 3.51

Virginia Tech **Aug 2020 - May 2023**
Bachelor of Science in Computer Science GPA: 3.76

CERTIFICATIONS

CompTIA Security+ (SY0-701) **Nov 2026**

SPECIALIZED SKILLS

Programming Languages: Python, Java, HTML, CSS, JavaScript, Typescript, Kotlin, SQL
Frameworks & Tools: React, FastAPI, Unity, Flutter, Android Studio, Linux/Unix, Authentication (Clerk), API
AI/ML: LangChain + RAG, Claude, Hugging Face, PyTorch, Keras, Natural Language Processing, Image Classification
Cloud & DevOps: Git/Github, AWS (S3, CloudFront, ACM), Google Cloud Run, Docker
Data & BI: Postgresql, MongoDB, Microsoft Power BI Platform

WORK EXPERIENCE

Full-Stack Engineer, *TeselWave Trading and Analytics LLC* (Remote) **Jul 2026 - Present**

- Building a full-stack web platform with FastAPI and React for a trading and analytics company.
- Developing an API-based portfolio aggregator that lets users import their portfolios from multiple third-party services and view them as a single combined portfolio.
- Launched the company's static landing page on AWS using S3, CloudFront, and ACM, and am deploying the full-stack application to AWS.

Full-Stack Engineer Intern, *Spirit AI* **Mar 2026 - Present**

- Engineered a React/FastAPI SaaS landing page and interactive AI character demo using Antigravity agentic coding tools, accelerating full-stack development velocity and reducing manual scaffolding time.
- Integrated a Unity-rendered 3D environment into the web frontend, enabling prospective customers to interact with a live LLM-powered conversational chatbot in-browser and bridging game-engine rendering with browser-based interfaces.
- Integrated Clerk-based authentication into the company's main website to secure user access.
- Added image generation features to the experience chatbot, extending its LLM-powered conversational capabilities.

PROJECT EXPERIENCE

Convo-Crafter

- Developed a Slack bot built with TypeScript and the Slack API to streamline meeting management for Boeing teams. Implemented features for creating and scheduling meetings, managing agendas, assigning action items, and enabling discreet flow control during discussions.
- Automated post-meeting reminders and personalized action item tracking to improve team accountability and follow-up efficiency.
- Presented final product to Boeing engineering leadership following 8 weeks of weekly stakeholder reviews.

SpeakSafe

- Built a real-time hate speech moderation tool for Discord using Discord.js, Wit.AI for voice transcription, and a Google Cloud-hosted Pysentimiento model from Hugging Face for hate speech detection.
- Automatically removed users producing flagged content from voice channels; managed blacklists via a custom Flask/MongoDB web interface.
- Won “Best Use of MongoDB” and “Best Design” awards.
